1. Experiment Purpose

This section demonstrates how to use the two buttons on the Micro:bit to control music switching.

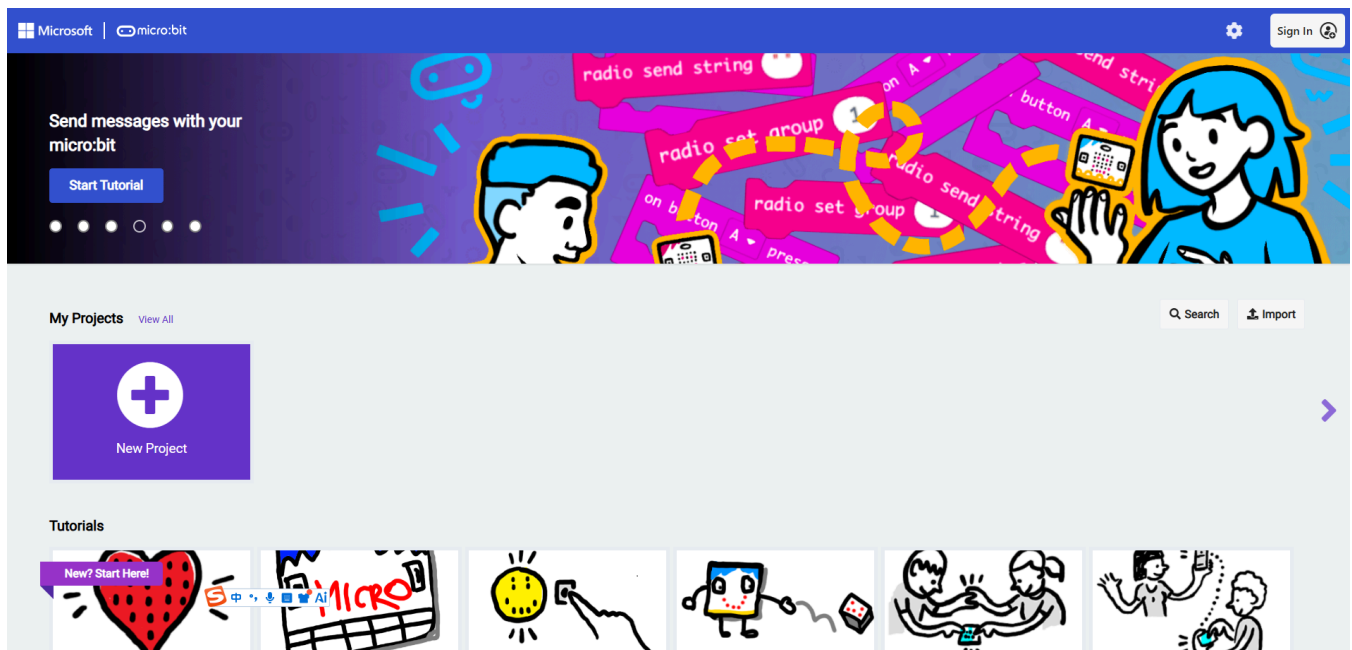

2. Experiment Steps

1. Before starting the experiment, connect the Micro:bit board to your computer using a Micro USB cable.
The computer will display the MICROBIT drive letter.

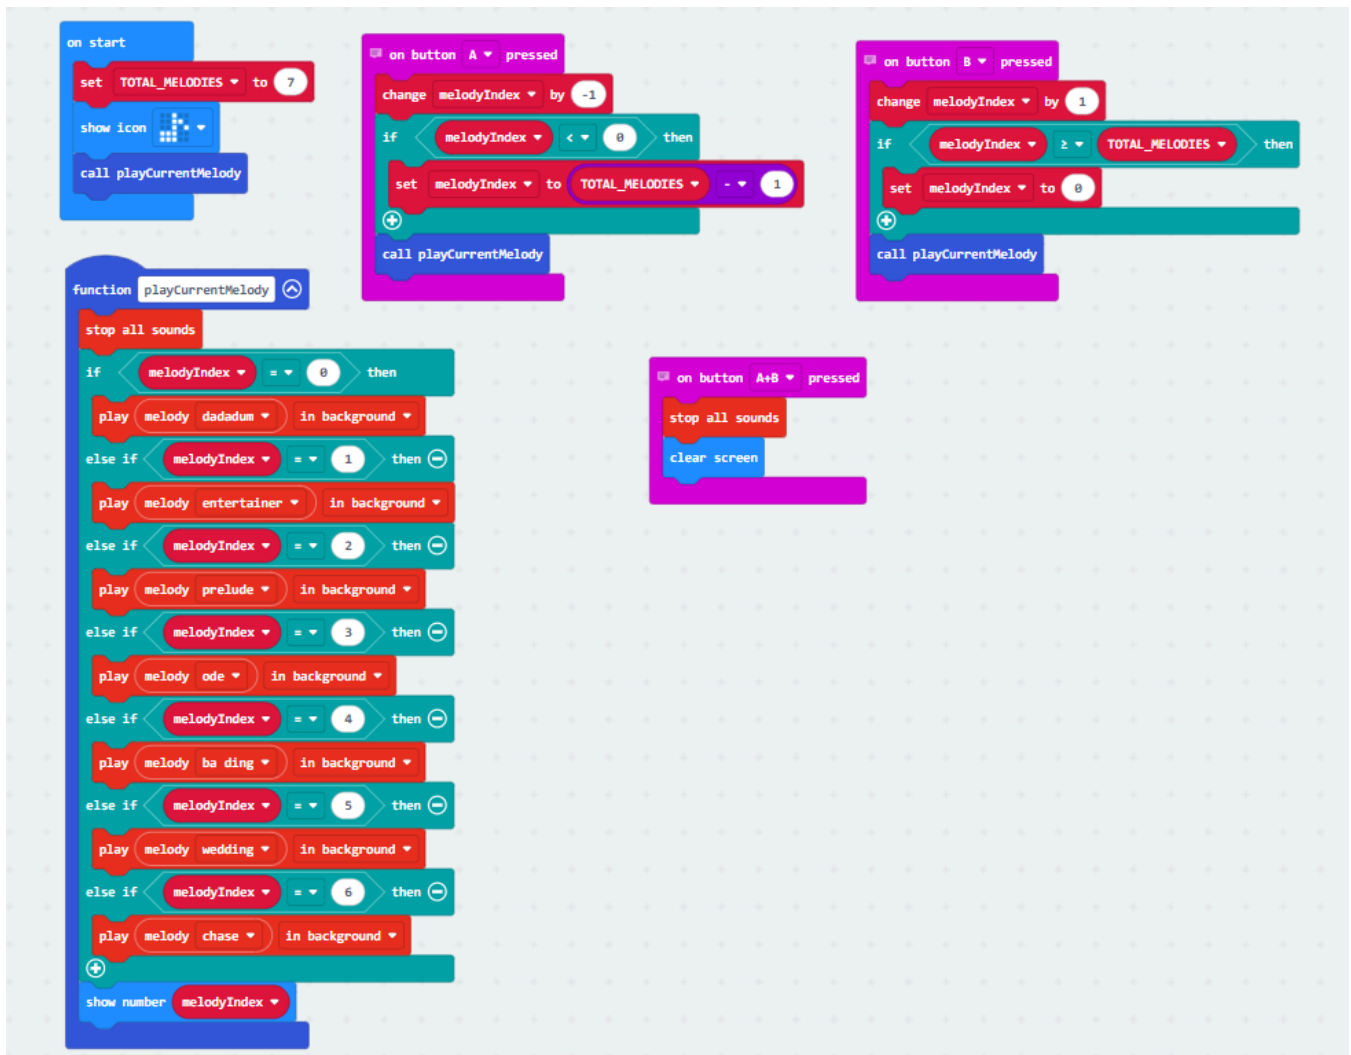

2. Open MakeCode using the link below.

[Microsoft MakeCode for micro:bit](#)

3. Drag `2.Press_to_Sing.hex` to the new project page. MakeCode will automatically import and open the project.

3. Experiment Source Code

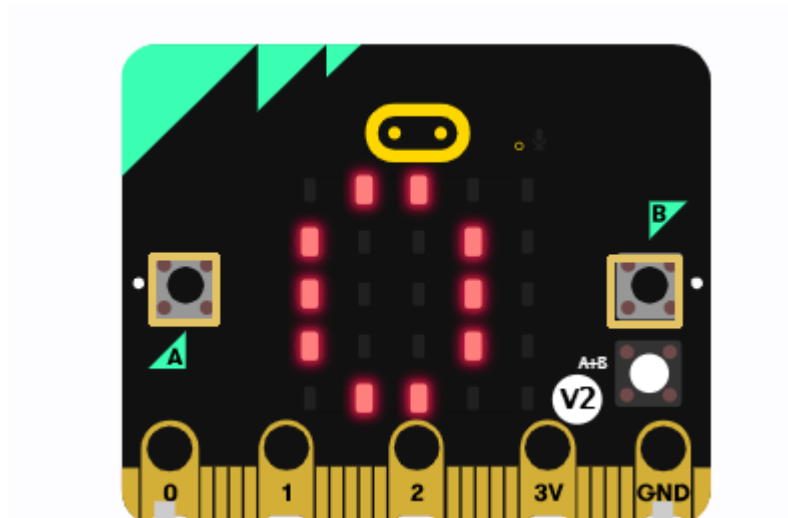

4. Program Download

The download operation is the same as in the previous section, so it will not be repeated here.

5. Experiment Result

After flashing, the screen will display a musical note icon, followed by music playing in the background. Press the B button to play the next song, press the A button to play the previous song, and press both buttons simultaneously to stop playback. This project includes seven melodies in the playlist.

In addition to the music in this project, the Micro:bit offers many built-in audio melodies. You can try replacing them with different ones. After modification, click the "Download" button again to flash the program to the Micro:bit.
