1. Experiment Purpose

This section demonstrates how to drive a passive buzzer to play a birthday song on the Micro:bit.

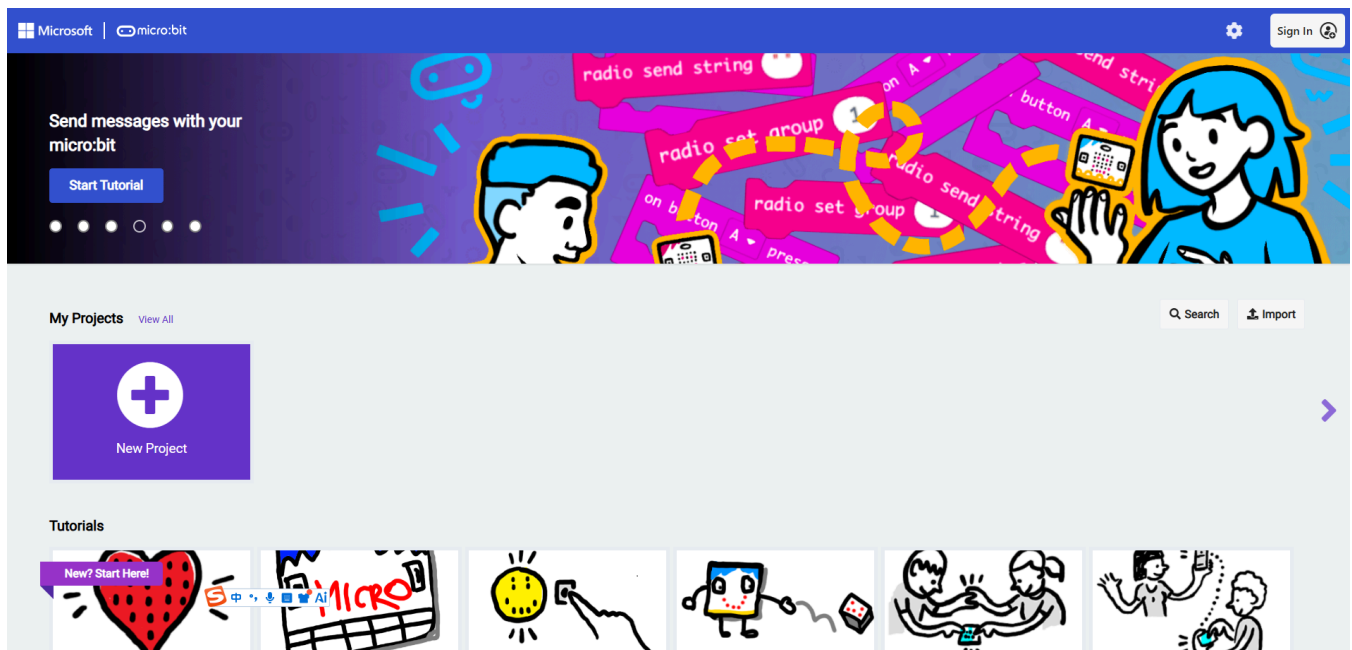

2. Experiment Steps

1. Before starting the experiment, connect the Micro:bit board to your computer using a Micro USB cable. The computer will display the MICROBIT drive letter.

2. Open MakeCode using the link below.

[Microsoft MakeCode for micro:bit](#)

3. Drag `1.Play_Birthday_Song.hex` to the new project page. MakeCode will automatically import and open the project.

4. Program Download

Click "Download" to automatically flash the program to the Micro:bit.

5. Experiment Result

After flashing, the screen will display a musical note icon, followed by the birthday song playing in the background. By default, it plays only once. To loop the playback, modify the playback parameter to `looping in background`.

In addition to the birthday song, the Micro:bit provides various built-in melodies. You can try replacing them with different ones. After modification, click the "Download" button again to flash the program to the Micro:bit.
