

Micro:bit Bluetooth APP Pairing Tutorial

Micro:bit Bluetooth APP Pairing Tutorial

1. Download Bluetooth APP
2. Flash Program to Micro:bit
3. Connect and Verify Bluetooth
4. Common Issues and Solutions

1. Download Bluetooth APP

1. Android users: Use browser to scan the QR code below to download and install, or get the "Android Remote Control APP" we provided from the download section.
2. Apple users: Use camera to scan QR code to enter App Store for installation, or search and install "Mbit" in App Store.
3. After installation, APP location permission is required.

IOS

Android

2. Flash Program to Micro:bit

1. Connect micro:bit board to computer using data cable. After successful connection, a drive named micro:bit will appear on the computer.
2. For Micro:bit V2 board, drag the "V2 Bluetooth APP Control.hex" file to the micro:bit drive or use the send function to write it.
3. For Micro:bit V1 board, drag the "V1 Bluetooth APP Control.hex" file to the micro:bit drive or use the send function to write it.

3. Connect and Verify Bluetooth

1. After flashing is complete and powering on the Lastbit car, the RGB searchlight shows red, indicating Bluetooth is not connected.
2. After successful Bluetooth connection, the RGB searchlight turns green and stays on, indicating Bluetooth connection has been established.
3. Bluetooth functionality may vary between different phone models; if you are still unable to connect, please uninstall your current Mbit version, download `mbit_fix.apk` from the download section, and refer to "microbit Bluetooth Manual Pairing Tutorial.pdf" for manual pairing instructions.

4. Common Issues and Solutions

- If the device cannot be found in the APP, please confirm that micro:bit is properly powered on and has the Bluetooth control program flashed.
- If manual pairing fails, please check if the pairing code entered matches the six-digit number displayed on the micro:bit LED matrix.
- If multiple attempts fail, try restarting phone Bluetooth or changing phones for troubleshooting.
